**Falls Ende** 2019-10 abstract there is considerable debate over whether international trade has contributed to the declining economic fortunes of less skilled workers one issue that has become lost in the current discussion is how firms respond to import competition and how these responses in turn are transmitted to the labor market in previous work we have argued that outsourcing by which we mean the import of intermediate inputs by domestic firms has contributed to an increase in the relative demand for skilled labor in the united states if firms respond to import competition from low wage countries by moving non skill intensive activities abroad then trade will shift employment towards skilled workers within industries in this paper we extend our previous work by combining new import data from the revised nber trade database with disaggregated data on input purchases from the census of manufactures we construct industry by industry estimates of outsourcing for the period 1972 1990 and reexamine whether outsourcing has contributed to an increase in relative demand for skilled labor our main finding is that outsourcing can account for 31 51 of the increase in the relative demand for skilled labor that occurred in u s manufacturing industries during

the 1980s compared to our previous estimate of 15 33

*Loose-leaf Version for International Economics* 2014-09-19 the economies of south korea and taiwan in the second half of the twentieth century are to scholars of economic development what the economy of britain in the late eighteenth and early nineteenth centuries is to economic historians this book first published in 2006 is a collaboration between a leading trade economist and a leading economic sociologist specializing in east asia and offers an explanation of the development paths of post world war ii korea and taiwan the ambitions of the authors go beyond this however they use these cases to reshape the way economists sociologists and political scientists will think about economic organization in the future they offer nothing less than a theory of and extended evidence for how capitalist economies become organized one of the principal empirical findings is that a primary cause for the industrialization of east asia is the retail revolution in the united states and the demand responsiveness of asian manufacturers

**Gunpowder Green** 2021-05-18 once unquestionably the world's leading economic and industrial power the united states now views with growing dismay the impressive industrial efficiency vigorous work ethics and large american holdings of various other nations is the united states truly lagging in its ability to compete effectively in world markets concern over this question has been voiced in both the business and government sectors as well as by academic economists a recent conference sponsored by the national bureau of economic research explored the effects of trade policies on a nation's ability to compete in international markets in trade policies for international competitiveness robert c feenstra collects seven papers from the conference each accompanied by discussants comments and adds a helpful introduction some of the issues considered by contributors are effects of macroeconomic and strategic foreign policies on competitiveness the recent influx of foreign direct investment in the united states primarily from japan the extent to which japanese trade patterns are a reflection of underlying factor and endowments rather than trade barriers and the market structure of canadian industries including applications for ongoing u s canadian free trade negotiations topical and provocative these papers will be of value to economists policymakers and those in the business world

**Putting Things in Order** 1997 abstract we propose an economic model of business groups that allows for the cooperative behavior of groups of firms where the number and size of each group is determined endogenously in this framework more than one configuration of groups can arise in equilibrium several different types of business groups can occur each of which is consistent with profit maximization and is stable this means that the economic logic does not fully determine the industrial structure leaving scope for political and sociological factors to have a lasting influence in a companion paper we argue that the differing structures of business groups found in south korea taiwan and japan fit the stylized results from the model and contrast the impact of these groups on the product variety of their country exports to the united states

The Political Economy of Trade Policy 1996 this volume of essays celebrates the influence that robert feenstra has had on south african law both directly as a result of his work having been cited in numerous judgements of the courts and indirectly through the academic and practical contributions of his students and the many other south african lawyers who have found guidance and inspiration in his work it is fitting that a book aimed at taking a critical look at the modern law of delict in south africa should be dedicated to robert feenstra first the history of our law of delict is one which underlines how much the law in every age is what the lawyers of the time make of it a theme which forms a golden thread through the

honorand s work secondly robert feenstra has contributed enormously to our understanding of the origins of the contemporary law of delict and without a thorough knowledge of the past we cannot hope to ask the right questions in respect of the law in its current stage of development

**You Only** 2004-08 an examination of the methods to measure the product variety of imports and the gains from trade due to product variety the application of the monopolistic competition model to international trade by elhanan helpman paul krugman and kelvin lancaster was one of the great achievements of international trade theory in the 1970s and 1980s monopolistic competition models have required new empirical methods to implement their theoretical insights however and in this book robert feenstra describes methods that have been developed to measure the product variety of imports and the gains from trade that are due to product variety feenstra first considers the consumer benefits from having access to new import varieties of differentiated products and examines a recent method to estimate the elasticity of substitution the extent of differentiation across products and to use that information to construct the gains from import variety he then examines claims of producer benefit from export variety arguing that the self selection of the more productive firms as the low productivity firms exit the market can be interpreted as a gain from product variety he makes use of a measurement of product variety known as the extensive margin of exports and imports finally he considers an alternative approach to quantifying the gains due to product variety by comparing real gdp calculated with and without the extensive margin of trade
